PROFESSIONAL SUMMARY

Entry-level Java Backend Developer with hands-on experience building production-inspired microservices using Java, Spring Boot, Spring Cloud, and RESTful APIs. Skilled in JWT-based stateless authentication, Spring Data JPA/Hibernate, Eureka Service Discovery, OpenFeign, and Resilience4j for fault-tolerant service communication. Experienced integrating Google Gemini LLM APIs, building React.js frontends and Chrome Extensions, and containerizing distributed services with Docker and Docker Compose. Seeking an entry-level Backend/Full-Stack Developer role to apply strong fundamentals in REST API design and microservices architecture.

TECHNICAL SKILLS

Programming Languages: Java, SQL, JavaScript, C++, HTML, CSS

Backend Technologies: Spring Boot, Spring MVC, Spring Security, Spring WebFlux, WebClient, Spring Data JPA, Hibernate, RESTful APIs

Microservices: Spring Cloud, Eureka Server, Spring Cloud Gateway, OpenFeign, Resilience4j, API Gateway, Service Discovery

Authentication &Security: JWT, Spring Security, Stateless Authentication, Role-Based Authorization, CORS

Frontend: React.js, JavaScript, Axios, HTML, CSS

AI & Integrations: LLM API, LLM Prompt Engineering, Chrome Extension (Manifest V3)

Databases: MySQL, Oracle.

DevOps & Tools: Docker, Docker Compose, Maven, npm, Git, GitHub, Postman, IntelliJ IDEA, Eclipse, Spring Tool Suite

Core Concepts: Microservices Architecture, REST API Design, Layered Architecture, OOP, Exception Handling, Inter-Service Communication

PROJECTS

Smart Food Ordering Platform | *Java 21 / Spring Boot 3.5 / Spring Cloud / Docker* | github.com/Saijdhav45/Smart-food-ordering-REST_API

- Developed a production-inspired distributed food ordering backend spanning 8 independent microservices (Authentication, Restaurant, Cart, Order, Payment, Notification, API Gateway, Eureka Server) using Java 21, Spring Boot, Spring Cloud, and MySQL.
- Implemented secure JWT-based authentication and authorization using Spring Security, enabling stateless access control across all protected REST APIs.
- Built RESTful APIs using layered architecture (Controllers, Services, Repositories, DTOs) with input validation and centralized exception handling, designed to reliablyhandle concurrent order requests.
- Configured Spring Cloud Gateway as the centralized API entry point and implemented Eureka Service Discoveryfor dynamic microservice registration and communication.
- Implemented inter-service communication using OpenFeign and improved fault tolerance using Resilience4j Circuit Breaker and Retry, then containerized all services and MySQL using Docker Compose for one-command deployment.

Smart Email Assistant – AI Email Reply Generator | *Java | Spring Boot | Spring WebFlux | React | Google Gemini API* | github.com/Saijdhav45/Email-Writer-AI

- Built a full-stack AI-powered email reply generation system integrating Spring Boot REST APIs, React.js, a Chrome Extension, and the Google Gemini API.
- Developed a reactive POST /api/email endpoint using Spring WebFlux WebClient to generate context-aware, tone-adjustable replies (Professional, Friendly, Casual) with non-blocking I/O.
- Built a Chrome Extension (Manifest V3) using DOM manipulation to detect the Gmail compose toolbar, inject an AI Reply button, and insert generated responses directly intothe compose box.
- Built a standalone React.js frontend using Axios enabling users to enter email content, select a tone, and generate AI replies independent of Gmail, with CORS configured to securely expose the backend toboth environments.
- Resolved a GitHub secret-scanning block caused bya hardcoded API key by migrating to environment-variable injection and resetting git history—reinforcing secure credential handling practices.

EDUCATION

Masters of Computer Science (Software Engineering) — 2027
CGPA: 8.0

Bachelor of Computer Science (B.Sc.) — 2025
MGM College of Computer Science & IT
Nanded
CGPA: 7.55

Higher Secondary Education (Class XII) — 2022
Maharashtra State Board
82.00%

Secondary Education (Class X) — 2020
Maharashtra State Board
88.20%
